2.0

”

For over 30 years it has been my passion to create innovative design cooker hoods as a household appliance. My mission is to promote Polish design worldwide. Ciarko hoods not only fit into the modern kitchens, they give this special place a unique touch. I'm proud that we can present our latest work to You.

We always look to the future!

Ciarko

FAMILY COMPANY

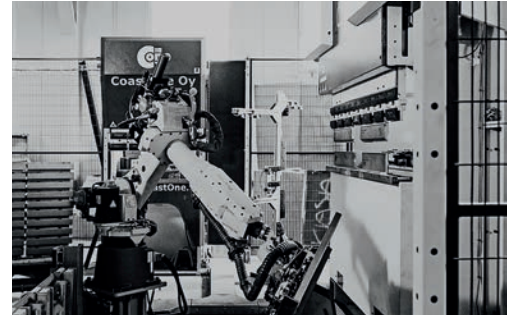

**We have been market leaders for 35 years.
Experience and innovation is what drives us.**

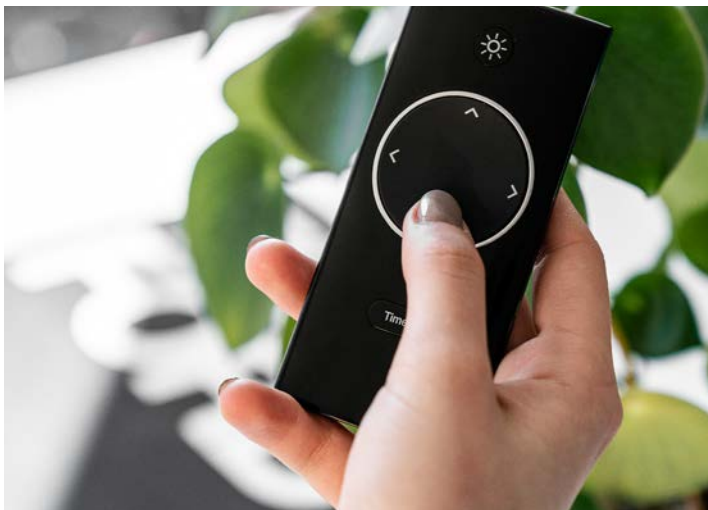

We proudly design exclusively **in Poland**. We produce **3,500** hoods per day, using more than **20,000 m2** production area. Our annual production is more than **1,000,000** hoods. All hoods are **100%** designed and manufactured by more than **600** our employees.

Ciarko is not only family business because of its founder. The entire organisation employs more than **100 families** who create the brand **Ciarko** every day and take care of the unquestionable quality of manufactured products. We know that **Ciarko** owes its strength and position as a world leader in the production of cooker hoods to the commitment and **the daily work of every employee**. The company is proud that its greatest asset and resource is its **people**.

From the very beginning, the company's mission has been sustainable development and environmental protection. This year, the company will make an investment in renewable energy that will allow the **reduction of electric energy consumption** produced during operation **up to 80%**.

Ciarko

FAMILY COMPANY

We always look to the future!

The brand's products have been **appreciated in 48 markets** world-wide, and technologies (min. gesture-controlled hood, air ventilation function) allow to improve the quality of time spent in the kitchen for millions of people around the world every year!

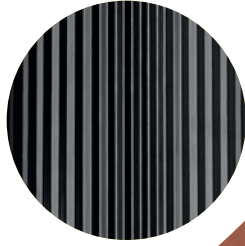

The company's premise is to strengthen Polish technological thought through cooperation with technological institutes and the Warsaw University of Technology. In 2021, the cooperation of a team of designers of **Ciarko** and scientists resulted in the creation of one of the **quietest BLDC engines on the market**.

Robotisation rate of the plant at 112 (the average for Poland is 52) allowed to optimise production processes but at the same time did not lead to the loss of high production flexibility. It has allowed to combine modern technical and IT solutions with a traditional craftsman's approach to work focused on a love of fine detail.

The company also invests in product design and establishes co-working relationships with Polish applied designers, for which it receives numerous awards including the „Oscar” of industrial design **Red Dot Design Award**. The number of projects and collaborations with young designers continues to grow year after year, and their designs are nominated for awards around the world.

WALL-MOUNTED MODELS

Monogram

WALL-MOUNTED MODEL

Completely different

Grooved surface will catch the eye of any lover of design and home comfort. Specially designed housing of the device includes up to **84 bends**.

Warm2ColdLED lighting. The rectangular LED lighting is the only perimeter solution used in the market. The frame around the hood precisely illuminates the cooking surface, providing ideal conditions for cooking. Adjustment of the lighting color temperature – from warm to cool – allows you to match the lighting to other lamps or the prevailing mood (2900K - 6000K).

Touchless Gesture Control system. You can turn the hood on and off or change its mode without interrupting cooking, wiping your hands or touching the control panel. Gesture Control technology allows lighting to be turned on and off with a movement of the wrist. For traditionalists, each hood comes with a remote control.

High durability and aesthetics of colour. The body of the Monogram hood is hand-painted. The surface has been coated with as many as three layers of paint to increase resistance to greasy dirt and prevent dust accumulation. This affects the comfort of use and maintenance of the device.

An engine that is virtually inaudible. The efficient, energy-saving BLDC engine uses up to 95% less energy compared to a conventional engine of similar efficiency. It makes it very quiet in the kitchen, and the air remains clean even after cooking for several hours.

Five-layer grease **filter removes grease** efficient and traps them permanently inside.

CEILING AND UNDERCABINET MODELS

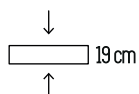

69

Su Frame

CEILING MODEL

An excellent light source and hood in one

Powerful flat BLDC engine. The use of a high-efficiency flat BLDC motor has made it possible to reduce the height of the hood to only 19 cm! Thanks to this, you will install it without troublesome renovation work - all you need to do is cut a hole of the appropriate size and screw the hood with 4 screws.

Remote control. With a sleek, convenient remote control, you can easily change the mode of the device even from a few meters away.

LED light frame. A large sheet of tempered glass was surrounded by led frame. This illumination will be an excellent decoration for the ceiling, especially in a kitchen open to the living room. In addition, it will help properly illuminate the cooking plate, so cooking will become more convenient. Adjustment of the lighting color temperature – from warm to cool - allows you to match the lighting to other lamps or the prevailing mood (2900K - 6000K).

An engine that is virtually inaudible. The efficient, energy-saving BLDC engine **uses up to 95% less energy** compared to a conventional engine of similar efficiency. It makes it very quiet in the kitchen, and the air remains clean even after cooking for several hours.

Breathe fresh air. The engine of the Su Frame hood surprises with its power. In an hour able to filter as much as 710 m³ of air! With such an efficient device, the air will remain fresh even in a living room open to the kitchen. The hood will effectively get rid of them, keeping the noise volume low during operation.

Touchless GestureControl system. Easy operation of the hood without the need to press specific buttons. You don't have to interrupt cooking to wipe your hands and change the hood settings. For traditionalists, a remote control is included with each hood.

Efficient communication is essential, especially in the kitchen. **The wireless connection of the hood to the induction hob** is a feature that will free you from unnecessary tasks and take cooking to a new level.

Warm2ColdLED lighting has adjustable light color - from warm to cool (**2900 K - 6000 K**). Warm light color, closest to sunlight, does not strain the eyes and puts you in a good mood. Cool-colored light will emphasize the beauty and character of your kitchen.

The steel, lacquered frame around the hood **protects the furniture panel from moisture**, while the glass used in the central part of the device is **extremely easy to clean**.

Wizard 2.0

MODEL INTEGRATED WITH INDUCTION HOB

Hood and induction cooktop in one device!

Increased absorption. Steam and unwanted odors in your kitchen take the shortest path and defy gravity, disappearing almost directly after escaping from the pot or pan.

Spilled liquid removal system. With an additional drip tray, your kitchen remains clean even after small spills during cooking.

Automatic induction cooking. The induction cooktop recognizes the moment water boils and automatically reduces power. With the Boost function, you can increase the heating power to the selected level with one button, thereby reducing cooking time to the necessary minimum.

Two Bridge Zones. The induction cooktop is equipped with a feature for dividing and combining cooking surfaces, allowing for even heating of large and unusual pots.

Cooking programs. Quickly and conveniently adjust the temperature to the type of dish being prepared using programs for defrosting and melting, maintaining a constant temperature, and slow cooking.

Cookware positioning. A visual signal indicates the most favorable places to position the cookware to fully utilize the power of the induction cooktop.

Odorless. The metal construction made of stainless steel does not retain odors. Metal filters are more effective than standard devices and can perform their task for many years.

Customize to your needs. You decide whether to install the air extraction at the front, back, or side of the cabinet. The Wizard hood is available as both an extractor and a recirculation hood with carbon filters.

Attention to detail. The Wizard cooktop with hood can be mounted flush with the countertop, protecting the cooktop from potential damage and helping to maintain cleanliness.

Wizard One

MODEL INTEGRATED WITH INDUCTION HOB

Perfect for those who seek quality and efficiency with essential function.

Metal construction made of noble steel doesn't retain odors for long years; in our design, you won't find any plastic elements!

Spilled liquid removal system with an additional drip tray, your kitchen stays clean even after small spills during cooking.

Easy access to filters easy access to the hood chamber, no sharp edges - easier cleaning and maintenance of grease filters, and Long-life filters guarantee not only excellent effectiveness but also a lifespan of up to 3 years.

Universal mounting you can mount the cooktop anywhere in the kitchen, whether it's an island, peninsula, or wall installation, all while maintaining full drawer size!

Timer with this intelligent timer, you can forget about monitoring cooking. You can set the timer for each heating zone separately.

Two Bridge Zones the induction cooktop is equipped with a feature for dividing and combining cooking surfaces, allowing for even heating of large and unusual pots.

Hood automation enables intelligent adjustment of the motor speed to the power used on the induction cooktop, ensuring efficient and energy-saving removal of kitchen vapors with minimal noise.

Wizard Slim

MODEL INTEGRATED WITH INDUCTION HOB

Maximum power, minimum space!

Narrower cooktop width now you can enjoy all the benefits of our wide induction cooktop even in smaller kitchens and cabinets with a width of 60 cm. It's the perfect solution for limited kitchen space.

Easy access to filters easy access to the hood chamber, no sharp edges - easier cleaning and maintenance of grease filters, and Long-life, which guarantee not only excellent effectiveness but also a lifespan of up to 3 years.

Automatic induction cooking the induction cooktop recognizes the moment water boils and automatically reduces power, thereby adjusting the hood power accordingly. With the Boost function, you can increase the heating power to the selected level with one button, thereby reducing cooking time to the necessary minimum.

Universal mounting you can mount the cooktop anywhere in the kitchen, whether it's an island, peninsula, or wall installation, all while maintaining full drawer size!

Solid construction our grill is made of metal, where you can safely place even very hot dishes, and it's positioned flush with the cooktop, allowing for easy movement across the entire surface.

Timer with this intelligent timer, you can forget about monitoring cooking. You can set the timer for each heating zone separately.

Two Bridge Zones the induction cooktop is equipped with a feature for dividing and combining cooking surfaces, allowing for even heating of large and unusual pots.

Hood automation enables intelligent adjustment of the motor speed to the power used on the induction cooktop, ensuring efficient and energy-saving removal of kitchen vapors with minimal noise.

Moondraft

COUNTERTOP MODEL

A new dimension of minimalism

Moondraft extends to a height of 50 cm. It's the only model on the market that combines high performance with maximum height, adjustable even for the largest pots. You can easily adjust the hood's height according to the type of dishes you are preparing: lower if you're frying in a pan and higher if you're using pots.

The hood retracts completely after cooking. When no longer needed, Moondraft slides back into its cassette. The perfect extension and retraction mechanism is equipped with sensors that prevent finger pinching. This safe solution is also used in the automotive industry.

Illuminated touch panel. You can control the hood from the touch panel with an LED display. Simply touch the panel to select any function and the intensity level of the device.

A motor that is practically silent. The efficient, energy-saving BLDC motor consumes up to 95% less energy compared to a traditional motor of similar performance. Thanks to it, the kitchen remains very quiet, and the air stays clean even after hours of cooking.

ISLAND MODEL

Create a perfect tailored hood

Personalisation. Stoneware, marble? Choose the texture yourself. An interchangeable module will allow you to create your own perfect hood in 2 custom widths: 90 cm and 120 cm.

Additional space. A stylish side shelf will be great for storing, for example, spices, and a glass window localized in the middle of the hood will allow for an impressive display of books or decorations.

Long Life reusable carbon filter is not only excellent performance, but also, thanks to their special material, 3-year lifetime.

Infinitely adjustable lighting colour. Soft, pleasant LED lighting, the intensity of which (warm, cold) can be adjusted according to the user's needs.

An engine that is virtually inaudible. The efficient, energy-saving BLDC engine **uses up to 95% less energy** compared to a conventional engine of similar efficiency. It makes it very quiet in the kitchen, and the air remains clean even after cooking for several hours.

Touchless Gesture Control system. Easy operation of the hood without pressing specific buttons. You don't have to stop cooking to wipe your hands and change the hood settings. All you have to do is move your hand under the device in a certain direction. For traditionalists, each hood comes with a remote control.

Baffle Filters. Baffle filters with a stainless steel baffle retain their air removal capacity for a long time and are more durable than traditional mesh and carbon filters. The advantage of these filters is the inhibition of condensation. The gaps between the metal panels provide better airflow and greater efficiency than in traditional filters. Baffle filters do not clog with kitchen grease and do not need to be cleaned as often as mesh filters. They can be washed in the dishwasher.

WALL-MOUNTED MODEL

Long live the form!

Simple form. Thanks to its innovative form, the hood is a remarkable decorative element of the interior. It is ideal for kitchens with small spaces.

It is possible to install the hood as an extractor, as well as to work in the absorber mode with long-life filters, which reduce unpleasant odours and provide fresh air. **Long Life** filter reusable carbon filter is not only excellent performance, but also, thanks to their special material, 3-year lifetime.

Thanks to the LED lighting, the hood evenly illuminates the cooking plate along with its immediate surroundings. **WARM2ColdLED** lighting with colour-controlled illumination - from warm to cold. The warm colour of light, most similar to sunlight, does not tire the eyes and sets a good mood. The cool coloured light will enhance the beauty and character of your kitchen.

TECHNOLOGY

137

We always look
to the **future!**

| noiseless **and energy-saving**

Energy efficiency hidden in the engine, **i.e. Polish thought has power**

What do we look for when buying a kitchen hood? Reliable studies show that primarily on the volume and performance of the equipment. Knowing these needs and with many years of experience behind us, we have products to offer, ideally matching the features you are looking for. It was in the Ciarko Design and Minimal hood lines that the high quality offered by the technology developed by Ciarko and the knowledge of engineers from the Warsaw University of Technology who worked on the heart of the hood, i.e. the **BLDC engine**. It is extremely quiet during operation, and also achieves an energy class of **A+++**, which **reduces energy consumption by up to 95%**. Its operation in the first gear, when it needs only 8 W, can be compared to the energy consumed by a single **small light bulb**. Thanks to the innovative housing, we can reduce the noise level of the hood during operation by as much as **6 dB**! What does this mean in practice?

Among other things, the fact that it will not interfere with our conversations, and this is a huge advantage that is becoming our standard - **Ciarko was one of the first brands on the market to lower the volume level of hoods below 40 dB.**

Gesture-controlled hood **Gesture Control**

Controlling the hood without touching the appliance, exclusively with the movements of our hands, is becoming a reality today. With a **simple gesture**, you can turn the device on or off, or change its settings for power or illumination. It's all thanks to hand motion sensors that make the previously intuitive hardware even more functional. From now on, its operation does not mean that we have to interrupt an activity just to turn on the hood. To use it, we no longer have to wipe our hands or worry about getting the control panel dirty. **Isn't it simple?**

Keeping the hood clean and controlling its operation has never been easier:

1

By holding your hand in front of the hood for about 2 sec, **you will turn on the lighting.**

2

Move your hand from left to right to **change the speed mode to a higher one.**

3

Shift to a lower gear by moving your hand from right to left and stop for about 2 seconds, to **turn off the lighting.**

**innovative
system** for
hood control

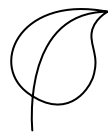

| cold, warm, warmer

Warm2ColdLED lighting

If you hesitate whether to choose a warm or cool light colour together with Ciarko you can resolve this dilemma once and for all. Technology **Warm2ColdLED** gives us the option of adjusting the colour of the light: warm, close to sunlight, does not tire the eyes, improving our wellbeing; while cooler allows us to highlight details and emphasizes the character of the interior. In addition to endless possibilities in kitchen design, **Warm2ColdLED** has another advantage: it illuminates the workspace with minimal power consumption. And this is true regardless of the time of day or the weather conditions outside the window.

A hood that takes care of the air

Today we are particularly concerned about **high quality air**. All the more reason to look into the function of a purifier that will take care of the air in the kitchen. **Removes unpleasant odours**, but will also take care of your health - such as **minimizing the amount of allergens in the air**. Let's remember that the air in our homes is not always ideal: sometimes there are harmful particles of mould, dust, chemicals or just allergens floating in it. It is estimated that air pollution levels in confined spaces can be up to 5x higher than outdoors. **Hence hood integrated with air purifier**, equipped with a special combination of HEPA filter and carbon filter, captures particles down to 1 micrometre in size and eliminates them. And this is crucial for our health and well-being.
