

VIRTUOSITY

AS DEFINED BY
LA MAISON DE DIETRICH:

*"Transforming raw materials to add elegance and emotion
using a high level of technical control and the utmost
precision. Demonstrating the very essence of our talent,
boldness and creativity in constantly reinventing products
that have excellence and emotion ingrained in them, as well
as being outstanding culinary products."*

De Dietrich

LA MAISON DE DIETRICH

LA MAISON DE DIETRICH
HAS BEEN BUILT UPON
A DYNASTY OF VISIONARIES.

It all started in Jaegerthal, a valley to the north of Strasbourg, with a tremendous gamble. In 1684, Johann Dietrich decided to invest in the forging industry. He stamped all his creations with a hunting horn and, in doing so, created the first logo in industrial history.

La Maison De Dietrich entered into a new era under the leadership of Jean de Dietrich, the successor who was given a peerage by Louis XV, and subsequently with Amélie de Dietrich, who was the first woman in industry to bring the importance of design and appearance into industrial production.

With this strong momentum behind it, the brand has never ceased to develop its approach towards innovation, ground-breaking ideas, and the French art of living.

OUR SAVOIR-FAIRE

Few French manufacturers can boast over 300 years of history as La Maison De Dietrich can.

Since its creation at the end of the 17th century, the company has provided a constant stream of creations, innovations and unique technology, such as the first domestic cooker, the pyrolytic oven, and the saturated steam oven.

In 1990, De Dietrich invented the first induction hobs. In 2010, it created Piano, the first zoneless induction hob, and in 2013 it launched the horiZone Chef induction hob, which counts four different cooking modes among its innovative new features.

Expertise is passed on from one generation to another, allowing us to offer today a level of excellence that is very rarely achieved. Inspired by its legacy, and its inherited knowledge, the new De Dietrich design is just as much a signature look as it is the personification of the French art of living.

THE FRENCH ART OF LIVING

De Dietrich provides a physical representation of the Art de vivre, or the French art of living, and is part of French culinary heritage.

Driven by a never-ending quest for perfection and creativity, the brand focuses on elevating raw, high-quality materials, and arousing pure emotion.

The gamble was successful for this virtuoso range, who has managed to combine pure design, innovation, and top-quality material. An unparalleled expertise which immediately awakens desire. Its historical partnership with the 3 Michelin star Chef Pierre Gagnaire also sums it up perfectly.

"With De Dietrich, we share the same desire to share culinary emotions. From basic moves to the most sophisticated techniques, everyone can unleash their creativity thanks to state-of-the-art equipment."

OUR MANUFACTURERS

De Dietrich fosters its love of excellence across all its manufacturers in France, creating the most wonderful harmonies. For over 300 years, exceptional execution has meant that its virtuosity and capacity for orchestration have set De Dietrich apart.

La Maison De Dietrich continues this quest for perfection by way of in-depth understanding, an exceptional level of expertise and precise actions. Just as musicians tirelessly repeat their scales, each of our engineers proudly ensures that each model is perfectly in tune with the brand's age-old reputation.

From transforming iron to developing connectivity, De Dietrich skilfully plays its part in designing and manufacturing perfectly-finished models.

A PHILOSOPHY OF EXCELLENCE

The brand is proud to be able to attach a 'Origine France Garantie' label to its products.

This label was created out of a Ministry of Industry initiative in 2011, and represents transparency and accuracy of information regarding the origin and manufacturing procedures for the majority of De Dietrich products. It is a point of reference for consumers with exacting standards, who are looking for outstanding, prestigious, top-quality products.

BVCert.6011825

A VIRTUOSO
INTERPRETATION
OF CULINARY ARTS

PHILHARMONIE NEW COLLECTION

The new Philharmonie Collection allows lovers of the French Art of Living to showcase their culinary talents and display their virtuosity. Embodying the perfect blend of innovation and aesthetic research, the collection enables everyone to achieve their highest level of excellence.

Heir to more than 350 years of history, this new De Dietrich collection brings to life the age-old expertise of a great French Maison, whose creations combine precise cooking, attractive design and noble materials. More than ever, with the Philharmonie collection, culinary arts take the stage.

The talent either of perfectly roasting a meat that can only be enjoyed medium rare, or of giving a perfect pearly finish to salmon flesh, or of making the palate feel the silky subtlety of a cream or the fragile crunch of a macaroon.

The Philharmonie Collection by De Dietrich gives the power to transcend a simple recipe, and transform it into pure emotion.

COLLECTION HERITAGE

Copper keys and hunting horn: set in the glossy black surfaces, De Dietrich's historical markers are reinterpreted in a precious and highly contemporary spirit. A tribute to the brand's age-old heritage and innovating power.

COLLECTION

INFINITE BLACK

A symphony in black major, this collection features noble materials, designed with precise lines and magnified by a stripped-down interface. Uncompromising elegance.

COLLECTION

STELLAR STEEL

This sonata in dominant black is punctuated with flashes of stainless steel, either brushed or mirror-polished. A highly contemporary inspiration, in which the metal gives depth to the black to enhance the craftsmanship and the quality of materials.

COLLECTION

ETERNAL WHITE

Timeless harmony of white and stainless steel for a music score full of purity and elegance. The immaculate classicism of white is punctuated with brushed stainless steel details that catch the light and highlight the beauty of materials.

COLLECTION

MASTER BLACK

In its integral matte version, black is embodied with unprecedented depth and velvety nuances that beckon the touch. A modern and absolute composition, lit here and there by a few contrasts of shiny black and smoked glass.

**SUPPORTING CULINARY
EXCELLENCE WITH
TECHNOLOGICAL VIRTUOSITY**

60CM OVENS

A perfect harmony between technology and aesthetics, our ovens transcend every recipe to transform them into pure emotion. With over 350 years of expertise, they combine precise cooking, attractive design, and noble materials. Do you wish to cook a beef Wellington? A perfectly cooked sea bass? Crunchy macarons? More than ever, Philharmonie ovens make culinary arts resonate. With them, lovers of gastronomy and the French art of living can fully showcase their virtuosity.

Design:
the art of being a maverick.

For all lovers of contemporary design, our ovens boast a distinctly new style and intuitive use. Noble materials and delicate finishes bear witness to the quest for perfect balance between elegance and high technology. The new ergonomic design has been thought to ensure a seamless experience. The full-width handle with bevelled edges creates a new sensory experience with its robust grip. The selector's off-centre location and the large display give its harmonious aesthetics to the whole. As a testimony, the fine edging underlining our iconic hunting horn illustrates the attention to detail borne by De Dietrich. A stripped-down vision serving cutting-edge engineering.

Sensory selector:
a browsing gem.

A centrepiece to Philharmonie ovens, the selector helps you browse seamlessly among all functionalities. Its design beckons the touch as much as the sight. The large-diameter selector, echoing the world of hi-fi, enables highly precise settings. Its notched, diamond-cut contour offers perfect grip as well as a pleasant feeling of control. Designed like a piece of jewellery, depending on the collection, it comes in sophisticated and contrasted matt or shiny finish, with accents of copper or stainless steel. Slightly off-center on the upper band, its positioning and proportions are eye-catching and a sign of a personality that leaves no aesthete indifferent.

Ai Smart Browsing.
An intuitive way to manage your cooking.

Use the large TFT screen to interact with your oven as you would with a kitchen team. Combining high definition text and images, it displays each interaction with De Dietrich Artificial Intelligence, as well as the cooking parameters. In Automatic mode, simply choose a recipe and the screen will intuitively guide you to the desired cooking method. And then, as a virtuoso soloist, the oven manages everything. In Manual mode, the screen displays instructions then recommends the optimal settings. And while magic is happening behind the oven door, you can check the progress of your cooking with a glance on the screen. With the selector, the Ai Smart browse can be controlled very intuitively. Now everyone can be a virtuoso cook!

Ai Talent Sensor.
Intelligence and virtuosity of a top chef.

Taste excellence without no false note. Rely on Ai Talent Sensor, an intelligent system that manages autonomously the cooking of your recipes. Choose one of the **150 recipes on offer** and Ai Talent Sensor will play the score without you needing to do anything. Temperature, duration, cooking method... The Perfect Sensor moisture sensor and powerful algorithms synchronise cooking parameters and match them in real time to meet the most demanding taste requirements. Combining precision and intelligence, the Ai Talent Sensor interface gives everyone the ability to create enchanting tastes.

Ai Talent Probe.
Absolute control of the core temperature.

For creative people who imagine their own recipes and those who like to personalize their cooking, the **wireless probe** is the ultimate precision tool. In Manual mode, simply enter the ideal core temperature. Inserted in the preparation, the probe precisely measures the internal heat: the oven rises in temperature and stops as soon as the result has been reached. Totally autonomous, the probe pairs with the oven via Bluetooth and can be recharged using its box. A prodigious performer to serve your culinary creations.

Ai Talent.
Virtuosity accessible to all.

Up to 122 recipes available.
To ensure perfect cooking quality, leave it to the chef! Simply select one of the pre-programmed recipes and the oven will take care of everything. It automatically determines the appropriate cooking parameters: the right cooking method, the ideal temperature and the required cooking time, down to the minute. You just have to enter the size or weight of your dish, and the oven will interpret all your culinary renditions.

Multifunction Plus:
the art of successfully preparing all meals as they should be prepared.

Fan Heat and Combined Heat, exclusive to De Dietrich. Like a virtuoso, you know all your recipes inside out, and the exact way to make them a success. Fan Heat turns out to be the ultimate cooking mode to reveal your culinary talents. This unique process distributes the heat evenly, preserving the delicate flesh of white meats, the flavour of papillotes, or cooking different dishes on three levels simultaneously, without mixing odours whilst preserving the authentic taste of each dish... Combined Heat by De Dietrich is unbeatable for providing an airy lightness to your pies or puff pastries. The Combined Heat system distributes evenly the heat produced by a resistance located around the fan, and is specially designed for moist cooking such as pies, quiches or pizzas. Energy saving is another benefit of this technique: the temperature rise is ultra-fast, thus eliminating the preheating phase. The **Fan Cooking function** is the only process that preserves the delicate texture of white meat and the aroma and flavour of foods cooked "en papillote", and that allows different dishes to be cooked on three levels at the same time whilst preserving the individual aromas of each.

Desserts:
excelling in a globally recognized art.

28 recipes offered in automatic cooking including an exclusive selection dedicated to French pastries. To create the greatest pastry classics with confidence and delight, from the simplest dessert to the most sophisticated, rely on the ingenuity and talent of the De Dietrich ovens. Macaroons, canelés or chocolate fondant, pavlova or tarte Tatin... Compete with French top pastry chefs: among the 28 desserts available in automatic baking, you have the choice between 14 exclusive French pastry recipes, to celebrate this major discipline in culinary arts.

Low temperature:
17 recipes proposed in automatic cooking.

Presenting tender, juicy meat, or a tasty, delicate and fragrant leg of lamb is no longer exclusive to top chefs. Choose your menu from the 17 pre-programmed dishes and let your Philharmonie oven work for your greatest pleasure. It features low temperature below 100°C: gentle and regular, perfectly controlled cooking over several hours. A unique cooking method in the world of Haute Cuisine. To bring you the very best in cooking meat, fish and other dishes, and bring out all their flavours.

***World Recipes:
an exclusive culinary
journey!***

**38 sweet or savoury dishes, with
automatic cooking.**

De Dietrich invites you on a tour of world flavours! Delicious culinary stops in over twenty countries are on the menu of the new Philharmonie ovens.

Easter bread, baklava, orange blossom Qurabiya, pastéis de nata, cannelloni, chicken tikka... Essentials of international cuisine, no less than 38 recipes - 22 sweet desserts and 16 savoury dishes - have been developed to offer you automatic cooking, with guaranteed results and success.

Discover them also on the Smart Control app of the connected ovens, which with each update, will allow you to expand your culinary horizon.

***Sabbath function.
Inventive
and functional.***

De Dietrich is breaking new ground in offering three new ovens equipped with a special Sabbath function. This programmable mode allows the oven to function completely independently for 25 hours, or up to 75 hours if required. A flow of electricity maintains a constant temperature of 90°C in the cavity, so that dishes may be cooked or kept warm without needing to use a thermostat. The interior light remains on all the time, even when the door is closed.

***Drying function.
Enhancing the flavours
of all your meals.***

De Dietrich has equipped its new ovens with a function that nowadays it would be difficult to do without. This dehydration process allows you to dry a large number of different foods at a perfectly controlled temperature of between 60°C and 80°C, including aromatic herbs, fruit and vegetables. By preventing the growth of bacteria, it allows you to preserve the produce for several months and use it whenever you like; it also preserves essential elements such as vitamins and minerals.

***Air Fry function.
A revolution in the art
of fat-free cooking.***

How would you like to guilt-free enjoy golden-brown potato chips as often as you wish?

De Dietrich invites you to discover Air Fry and the unsuspected extent of its capabilities, so that you can prepare and share delicious gourmet cooking with no restraint. Roasted cauliflower with pesto, breaded chicken with pistachio and sesame seeds, light and crispy sweet potato fries, lovely slices of dried citrus fruits... Air Fry helps you cook and brown all kinds of dishes in the oven, with very little or no added fat.

To awaken your senses and enhance the taste of your roasted winter vegetables, simply spray them with a few drops of olive oil, preferably flavoured with truffle or thyme for example.

A perforated cooking plate specially dedicated to this function will optimize the circulation of heat around the food without having to turn it over, guaranteeing results that are as perfect as they are delicious.

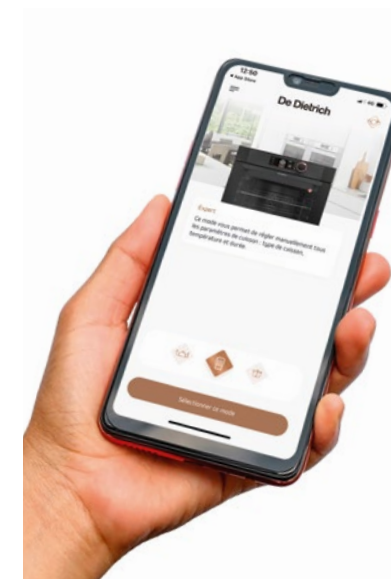

***Variable Grill
function: up to
4 power settings.***

Some of the apparently simplest recipes - such as meringues - actually require high skills - on work to achieve perfection.

By modulating the heat of the grill between 1 and 4, this function helps you to achieve culinary feats on a daily basis.

***Crispy - Keep warm -
Add 5 min - Favourites:
transform the culinary
experience... And bring
out the chef in you!***

Because your oven understands your cooking habits better than anyone else, it provides three options that you simply select at the start and/or end of cooking in order to perfect your dishes: bring a crispier & more golden finish, keep your dish at the right temperature without the risk of overcooking, and extend the cooking time by 5 minutes without having to change the settings. The 'Preferred dishes' feature allows you to memorize up to 6 dishes - 3 in manual cooking mode and 3 in automatic cooking mode - so as to instantly retrieve the programmed parameters when preparing your favourite recipes.

***New connected ovens.
Cutting-edge technology
and heritage.***

To keep up with the times and cook like a talented future chef, rely on the new connected Philharmonie ovens' smartness. Like a virtuoso musician facing their score, compose, perform or improvise your greatest culinary renditions via the Smart Control mobile application.

Dedicated to culinary excellence.

Using the Smart Control application on your WiFi-connected smartphone and/or tablet, you can control and schedule all the oven's functions remotely, and prepare the countless recipes available in assisted or automatic cooking with all due precision. It also features customisable alerts and notifications: open door, pyrolysis, programme start and end, completed preheating, etc. Thanks to Smart Control, the recommended temperature can be adjusted to the nearest degree. Demanding gourmets, cooks and pastry chefs particularly appreciate this precision.

3 steps to controlling your oven.

- 1/ Download the Smart Control app on Android or IOS.
- 2/ Connect your oven using the QR code located on the rear of the door.
- 3/ Enjoy the convenience of a connected oven.

*A real new gem
for faultlessly executing
all your greatest
culinary classics.*

**Optimised 73-litre volume and
outstanding energy performance.**

De Dietrich ovens stand out due to their large 73-litre cavity volume. This space makes it as easy as can be to prepare large or wide dishes, with six different shelf levels easily identifiable on the sides of the oven so that you can follow its recommendations and place your cooking dish at the ideal height. The carefully thought-out cavity design and the reinforced wall insulation make for a shorter pre-heating time and perfect temperature control at the lowest possible price, as demonstrated by its A+ energy label.

**A complete equipment, with great
functionality.**

♦ **The racks** on which you place your dishes rest are designed to be safely moved up to three quarters of their depth out of the oven. They are equipped with two legs and a hoop at the back preventing the dishes from tipping over.

♦ **The outgoing rail system**, depending on the model, allows you to slide racks and dishes out of the oven with the greatest comfort.

♦ **A multiuse baking tray** equips all the ovens. It is fitted with a handle on the front for easy operation. Its 45mm depth enables juices and fats to be collected and it can be used half-filled with water for double-boiler cooking. On some models, this dish is provided with two removable and adjustable half-grids.

♦ **The special 8mm baking tray** can be recognized by its angled plane. Its non-stick surface provides extreme comfort of use and makes it easier to bake puff pastry, cookies or shortbread, for example.

♦ These accessories are complemented with a **perforated tray specially designed for the Air Fry feature**. It is also recommended for cooking pizzas and pastries and for drying food in dehydration mode.

**Soft Close Door: the ultimate comfort
of soft closure.**

This patented system, exclusive to De Dietrich, enables the oven door to close smoothly.

Halogen lighting.

Halogen lighting provides the perfect light - natural, powerful and even. It gives excellent visibility on all levels of the cavity, even when there are several dishes being cooked at once.

*De Dietrich Hydrolysis
and Pyrolysis
cleaning modes:
the art of maintaining
uncompromising
excellence*

To satisfy and reconcile users' requirements regarding cleaning efficiency, energy consumption and respect for the environment, De Dietrich has developed a rich collection of ovens offering the choice between various processes such as hydrolysis or pyrolysis, or even both... Optimum cleaning in all circumstances.

Oven walls on which nothing sticks.

The interior of the ovens is lined with 'enamelite', exclusive to De Dietrich. This highly resistant enamel provides exceptional shine and durability. This ultra-smooth vitrified surface reduces the adhesion of greasy spills, and cuts down on maintenance.

**Pyrolysis: bespoke automatic cleaning
for optimum efficiency.**

To ensure that your oven is always immaculate, its interactive screen will automatically send you a signal when it's time to start one of its three available pyrolysis cycles. The Pyro 2H feature ensures that cleaning is carried out in depth, for two hours. The Pyro Express mode cleans the cavity in 59 minutes using the residual heat from previous cooking.

As far as the exclusive Pyro Auto system is concerned, the oven automatically manages the time necessary for perfect cleaning, between 1h30 and 2h15, depending on the degree of dirtiness detected.

**Hydrolysis: Simple, quick, and eco-
friendly for daily use.**

This "natural" cleaning method allows you to maintain your oven after each cooking session if needed. Simply spray 300 ml of water into the cavity to perform an effortless steam cleaning. A 35-minute cycle is enough to loosen the grease, which can then be wiped away with a sponge.

**Ovens combining Hydrolysis and
Pyrolysis: an Innovative solution.**

The new DOPH375B/X ovens are revolutionary and versatile: on the same interface, a hybrid solution allows you to choose between the two cleaning technologies - Hydrolysis and Pyrolysis.

*Exceptionally high
safety levels.*

Cool door with 4 glass panels.

Thanks to a ventilation system that is exclusive to De Dietrich and the use of four glass panels, the oven door remains below the burn threshold at all points.

**Control Lock and Auto-Stop safety
features.**

The first allows you to lock the control panel to avoid switching on the oven accidentally; the second switches the oven off automatically after 23 hours if you forget it.

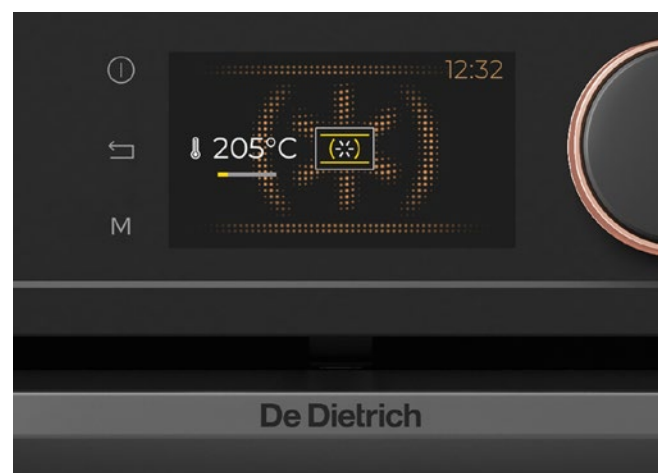

Three new interfaces provide intuitive access to all functions.

De Dietrich has always based its oven designs on one intangible value: precision. Here, beneath a simply beautiful design, the electronics reigns supreme with three different programming modes, all controlled by a unique dial that is a rare combination of sophistication and functionality. It turns smoothly to provide an on-screen display of all functions and cooking methods available: then all you have to do is make your selection by lightly touching the centre of the controller.

Programmer with LCD Screen.

Similar to the previous programmer, this one offers equally logical access. You browse through submenus and categories of cooked dishes using the selector. Each function or recipe is illustrated accurately and with attention to detail, simplifying reading and understanding.

Programmer with 4.3" TFT Color Screen.

The interface features a wide, high-resolution colour screen that is simple and intuitive, allowing you to browse through modes, categories, and submenus. Each option is illustrated with striking realism and uniqueness. Stunning photos appear on the screen when presenting the numerous predefined dishes and recipes in Auto Mode, Low-Temperature Cooking, Desserts, or World Recipes, as well as in manual functions like Air Fry or Drying.

Programmer with white LED Screen.

After selecting one of the functions or preprogrammed dishes, the screen precisely displays the main functions and cooking parameters. It provides perfectly readable recommendations on the rack level, the appropriate temperature, and guides you through the proper execution of the programmed cooking process.

STEAM OVEN

Ai Talent CombiSteam Oven. A unique culinary experience to tantalise your taste buds!

Reveal the virtuoso cook in you!

A true showcase for your success, the Ai Talent Combisteam De Dietrich oven reveals the brand's know-how and talent in the world of cuisine. Multifunction Plus, Combined Steam or 100% Steam... Air Fry, Crispy Finish, Sous vide functions... Like top chefs, you now have the best instruments of traditional cooking and modern cuisine: you can develop your own recipes by the rulebook in manual mode, or achieve culinary perfection with the countless recipes on offer in automatic cooking (Auto Mode).

Combined steam cooking: tasty, healthy and dietary cooking.

An essential partner for gourmet and light dishes, with preserved vitamins and mineral salts, the De Dietrich Ai Talent Combi steam modes oven brings together up to 135 predefined recipes including 31 in Combined Steam and 29 in 100% Steam. With great skill and extreme precision, your oven combines all the ingredients for controlled cooking to the nearest degree and automatically sets all parameters: traditional or steam cooking mode, ideal temperature, including the appropriate cooking time, adjusted to the minute using sensors embedded in the oven control system.

Sous vide cooking. a symphony of tastes.

Will you be tempted by a new and unique culinary experience? Discover the benefits of sous vide cooking in your new De Dietrich combined steam oven. This gentle, respectful cooking process for vacuum-packed food, so popular with top chefs, is unrivalled when it comes to preserving the texture and nutritional qualities of dishes, or enhancing the flavour of meat, poultry and fish, as well as fruit and vegetables. It's also an ideal way of preserving your preparations over a longer period of time. Cooked or semi-cooked foie gras, salmon steak, etc. Execute your own sous vide recipes in 100% Steam Manual mode or indulge in the excellence of the 5 pre-programmed Automatic cooking recipes. Stability and precision of temperatures, cooking times... Your oven controls every essential parameter for an exceptional culinary result.

Extreme ease to use and remarkable comfort.

Its pyrolytic cleaning mode combines efficiency and economy ensuring that you always have a spotless oven. The steam cooking process does not require any special installation. The water tank is located on the front for easy access. Opening and emptying are automatic. Equipped with the Soft Close system and designed with 4 layers of glass, the oven door remains cold during cooking and pyrolysis.

45CM OVENS

Noble materials, quality of finishes, refined colours, technical mastery and sensoriality...
Like the different instruments in an orchestra, the Philharmonie Collection 45cm ovens play their part in a perfect ensemble, harmonizing their design with the 60cm ovens to adapt perfectly to all kitchen configurations. Both complementary and independent, they bring together a wealth of talent to perform your best culinary standards, to bring out the aromas of contemporary cuisine, or to play your recipes at a faster tempo.

New 100% Combi Steam oven.
This gives you the choice between Multifunction Plus, combination steam or 100% steam, with technology inspired by professional kitchens. The process does not require any special installation to take place, thanks to the water tank located on the front. There are two cooking applications offered within the Combined Steam setting: a three-setting Expert Mode and a Cooking Guide. In Expert Mode, the oven manages all selected settings electronically. With the Cooking Guide, all you have to do is make your choice and enter the weight of the food. The oven will automatically determine and manage all settings required to successfully create a healthy and nutritional dish.

Multifunction Plus Pyrolytic Oven.
With a 40-litre volume, this oven can do everything that traditional-sized ovens can do. Included in the ten highly distinctive functions offered by the Multifunction Plus is a “Bread” mode, enabling you to lay your table with soft, golden and crusty bread whenever you like. 15 preprogrammed recipes are also provided in the Cooking Guide so you can be sure to succeed, whatever type you are cooking.

Steam Oven.
Preserving the vitamins, minerals, flavour, consistency and colour of food, using steam has created an entirely new way of cooking. This Steam oven means you can use this unique, gentle, healthy and delicate cooking method, which is widely acknowledged and appreciated, with the utmost precision.

Microwave Ovens.
Nothing beats a microwave when it comes to defrosting food in record time, or reheating or cooking two large dishes simultaneously whilst still managing to preserve their flavour and nutritional properties. Combining a folding grill with four different power settings and Fan cooking, De Dietrich microwaves offer ten different preprogrammed dishes for an entirely automatic cooking process.

HEATING AND SOUS VIDE DRAWERS

De Dietrich has enriched its collection with three independent drawers, in perfect harmony with the design and functional spirit of Philharmonie ovens. Endowed with multiple advantages, they settle in your kitchen to keep your dishes warm or to cook with this extremely effective and qualitative preservation technique: sous vide cooking.

As part of a new art of living a harmonious, refined and ingenious kitchen, they adapt to your aesthetic and culinary requirements with the greatest comfort, to orchestrate all your culinary renditions.

Warming drawer.

Its interior volume, lined with non-slip material, can accommodate a full service of 6 place settings in total confidence. To preheat plates, bowls or coffee cups or reheat cooked dishes without drying them out, the temperature - between 30° and 80°C - is controlled electronically, i.e. with great precision. Thanks to its flexible settings, even the most delicate dishes can be defrosted or cooked at low temperature. By setting a timer or a delayed start, you can be sure that you'll be on time to share with your guests these moments of pure conviviality.

Professional sous vide packing drawer.

Top chefs find it essential and De Dietrich makes it more refined and tasty: the drawer is able to vacuum-pack and seal by the rulebook the most varied dishes before or after cooking. While its functionalities are inspired by the professional world, like its stainless steel lifting tray for easy storing and vacuum packing foodstuffs, this model above all deploys a variety of applications which will provide increased pleasure to all your senses. Its digital control panel gives access to numerous programs and three pre-set cycles dedicated to marinating and maturing dishes to match starred recipes, and to vacuum-packing liquids so that you can enjoy this delicious Sunday vegetable soup or that excellent side sauce more often.

Multifunction sous vide drawer.

De Dietrich sous vide is the ideal conditioning method for preserving, freezing or sous vide cooking meat, fish and any other food whose taste qualities you want to preserve. This new drawer ingenious features will allow you to wrap the food and hermetically seal the bags in which they are stored for even greater enjoyment.

With its attention to detail and perfection, De Dietrich equips it with LED lighting providing the interior space with maximum visibility and fits it with two storage systems for aluminium/plastic film rolls, and a digital kitchen scale to help divide dishes into portions.

With these sous vide packed dishes, this drawer will quickly become the essential partner for orchestrating the cooking of your future recipes in your Combisteam or on your Philharmonie induction hob.

Design and functionality: the perfect match.

Their dimensions and their stripped-down 14cm-high front glass, have been designed to elegantly find their place in a column, below the 45 or 60 ovens, in perfect alignment. Fitted with telescopic rails with integrated brakes, they open and close smoothly, without the risk of colliding or destabilizing their contents for greater ease and confidence of use..

DWD4830B PROFESSIONAL SOUS VIDE DRAWER

- ◆ Height 14 cm
- ◆ Standard programmes, Special Maturation, Special Marination, Special Liquids
- ◆ Electronic control with touch-sensitive controls
- ◆ Telescopic Rails
- ◆ Suction power up to 99.9%
- ◆ Vacuum pump power: 3 m³/h
- ◆ 4 sous vide levels
- ◆ 3 Sealing levels (minimum, medium, maximum)
- ◆ Included accessories: 50 sous vide bags (200 x 250 mm and 250 x 300 mm) + 1 sous vide Line (for connection to an external sous vide container)
- ◆ Built-in dimensions: H 140 mm x W 560 mm x D 550 mm

DWD4830B | INFINITE BLACK

Professional sous vide drawer.

Inspired by professional equipment, this drawer features a lifting platform to place and sous vide seal food. It offers three predefined cycles: one for marinating, one for aging dishes, and one for sous vide sealing liquids.

INDUCTION HOBS

Our induction hobs take the bold step of turning your recipes into perfection while freeing you from cooking constraints. Made from noble materials, they offer a stripped-down design that leaves plenty of room for your culinary talent.

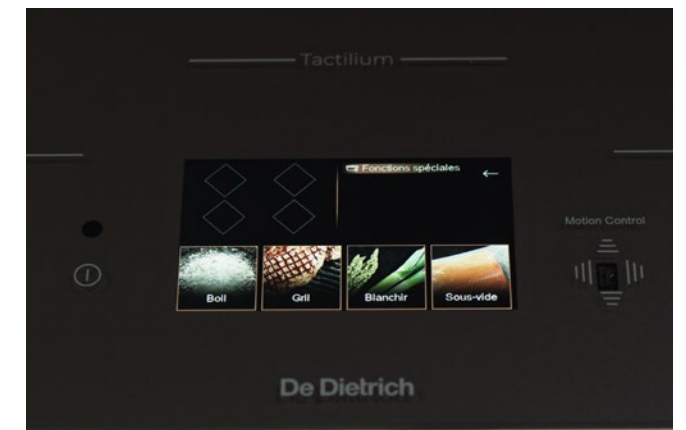

A sauce reduction, a veal stew, pan-fried scallops... The Philharmonie induction hobs enable perfect cooking results thanks to the precise indications displayed on the dialogue screen.

Never before has your cuisine been interpreted with such brilliance and ease

Design: the ultimate culinary art.

Our induction hobs contemporary design is in tune with intuitive use. From sleek surfaces to high-end finishes, every detail is carefully considered to create precision cooking. The backlighting subtle colours, the screen printing finesse, the control panel animations fluidity, the understated brand signature with its edging and hunting horn... More than ever, our hobs are the mirror in which your finest creations take shape.

The interfaces: access to the secrets of top chefs.

Be inspired by Michelin-starred recipes. Our different interfaces provide you with intuitive guidance and reveal their mysteries. Adopt the wide panoramic TFT screen, exclusive to the high-end hobs, to enjoy a unique culinary experience. When a cooking zone has been selected, the touch screen opens to allow one-finger control of the parameters. If you prefer the LCD interface and its backlit keys offering clear and precise text display, you may also opt for elegant screen-printed controls. Whatever your choice, the display gives access to a Culinary Guide of 84 dishes and Step-by-Step Recipes from Michelin-starred chefs. The top Chefs' technical skills will no longer hold any secrets for you.

Ai Talent and Ai Talent Chef: cutting-edge technology by De Dietrich, to orchestrate your future success!

Sharing its commitment for excellence with you, De Dietrich and its Philharmonie hobs give you access to over a hundred pre-programmed recipes, all created by top chefs. Thanks to Ai Talent and Ai Talent Chef, get ready for an exceptional culinary recital!

◆ **Ai Talent: guiding you to success.**
This autonomous technology will assist you in preparing your dishes and supervising their cooking. Choose from the 84 recipes displayed in the Culinary Guide and follow AI's instructions: It tells you what type of pan and which hob to use, and adjusts the power and cooking time to ensure perfect results.

◆ **Ai Talent Chef: step-by-step excellence.**
Thanks to our embedded technology and Step-by-Step Recipe mode, you can successfully prepare one of the 25 French and international emblematic dishes. Ingredients and quantities, steps to follow and procedures to perform... Each phase is as detailed as in a cookbook, so you'll never be short of precision, inspiration or talent.

Motion Control: your contactless controlled recipes.

Touching the controls on a hob after you've 'done the work' is bound to get messy. How about avoiding this by directing your cooking with a simple hand wave? Contactless Motion Control technology means you can interact with our hobs without touching them. A sensor detects and interprets the hand motion to browse the menu, adjust the settings of dishes in progress and precisely set the cooking temperature or time, with a high level of reliability and precision.

To master the gestures, follow the on-screen tutorial. There's nothing like the clean, fingerprint-free surface of your hob to showcase the refined presentation of a dish.

Ai Talent Probe. At the heart of culinary excellence.

Our new collection of induction hobs can be fitted with a wireless temperature probe and its holder. Ai Talent Probe enables precise control of the food core temperature. The probe gives the information in real time to the control panel to help you control your cooking to the nearest degree, or let the hob control all parameters automatically. From the meticulous tempering of chocolate to the delicate cooking of sous-vide food, you're always assured of perfect results.

Three operating modes are available, so that you can follow your score according to your culinary expertise, or your desires.

◆ By entering the **Culinary Guide**, you will discover that your probe is your best ally for performing by the rulebook one of the 10 sous-vide recipes proposed by AI Talent. Vegetables, fish steak, filet mignon, roast beef... and foie gras! A masterful cooking, to the exact degree, to enhance the flavours and allow the virtuoso in you to express fully their talent.

◆ In **assisted mode**, seven pre-programmed functions are proposed with direct access to the control panel of your hob: melting chocolate, sous-vide cooking, warming dishes, stewing or boiling, frying or searing... Depending on the type of cooking you choose, the pre-set temperature is automatically displayed, with the option of adjusting it to your recipes, with a high degree of precision and the assurance of a perfectly controlled cooking.

◆ In **manual mode**, prepare your recipe as you are used to, but with the utmost precision. You set the desired temperature to the nearest degree, which is displayed on the digital screen. Once the set temperature has been reached, the hob emits a beep.

-  **Melting**
50°C by default, adjustable from 40 to 70°C
-  **Sous vide cooking**
60°C, adjustable from 45 to 85°C
-  **Warming**
70°C, adjustable from 65 to 80°C
-  **Slow cooking**
80°C, adjustable from 80 to 90°C
-  **Boiling**
100 °C
-  **Frying**
180°C, adjustable from 130 to 190°C
-  **Searing**
60°C, adjustable from 40 to 85°C

horiZone.
The culmination of revolutionary technology.

This 40 x 23cm modular cooking zone is the most complete available on the market and the culmination of De Dietrich French engineers' technological know-how. It can accommodate all types of large, oval, or rectangular containers, including the 23cm frying pan or the 40cm oval casserole dish. It provides a wide range of configurations for unlimited cooking, allowing you to arrange a number of small saucepans or a single large dish as you wish on this clear space. De Dietrich offers a wide range of horiZone induction hobs to meet every need.

Grill function:
A new take on summer classics.

Recreate your finest summer renditions on your induction hob and rediscover the authentic taste and unrivalled flavour of barbecue cooking... Grilled lamb chops, beef steak or red mullet with anise... To give free rein to your desires whatever the season, De Dietrich offers you the option of a cast iron grill, ideally designed to complement your Philharmonie hob and fit onto one of the horiZone cooking zones. A cooking function is associated with it to sear and sizzle your meat and fish by the rulebook. A fine marinade will bring out the best of their flavour and tenderness.

Induction hob, hood & Autolink.
Cooking and suction in tune.

If you want to live your passion even more intensely, imagine a hood that blows in tune with your culinary performances, before you even think about it... The combination of aesthetic harmony, performance and exclusive processes is the daring marriage of this De Dietrich hob and extractor hood set, divinely sealed by Autolink technology: the extractor hood's suction system and lighting are triggered spontaneously from the moment the induction hob is switched on, by a simple infrared link; it adjusts its suction flow independently according to the set power of the cooking in progress, then switches off automatically at the end of the cooking. So all you have to do is focus on your culinary preparations with all due attention.

Optional grill: DAIG001B

Fonction Eco.
Uncompromising cooking results.

With its finger on the pulse of trends, De Dietrich offers a new way of cooking to all those who wish to reconcile energy sobriety and culinary delight. The Eco function uses the residual heat from boiling to continue cooking with the cooking zone off. All you have to do is cover the utensil, choose your Eco recipe in the culinary guide and let the hob run until the final note. A passive cooking in a way, full of promise and attention.

Tenor 5500W Inductor.
to unleash one's virtuoso power.

Top chefs are unanimous: if precision determines the success of any recipe, speed of temperature rise and heating power are equally decisive... These qualities are those of the new Tenor inductor, equipped with a double burner and a power injection system optimized for greater performance. This 30cm diameter cooking zone can reach 5,500W in record time (time saving of 25% compared to a 4,600W cooking zone for similar power consumption) to boil up ultra-fast and sear your meat with astonishing virtuosity for an exceptional result.

Power Management.
When energy meets your needs.

The new De Dietrich induction hobs can be installed without any concern for electrical constraints. Their redesigned design - via new algorithms and electronic systems - now offers four different power levels and connections: 7,400W - 32A / 5,700W - 25A / 4,600W - 20A / 3,600W - 16A. The option of limiting the maximum power delivered by the hob (set to 7400W by default) ensures optimum use and performance, whatever your living environment and the electrical standards in force. No more limits to your culinary imagination and installation constraints!

Backlight.
An ode to ultimate refinement.

A fusion of materials and textures, quality of finishes, attention to detail... This collection of induction hobs in intense and deep black glass, is particularly dedicated to lovers of unusual objects wishing to combine perfection and harmony.

This new Backlight feature means that nothing is visible from the control panel so that, once turned off, the hob can blend seamlessly into the surrounding environment. The epitome of refinement for the most elegant living spaces.

The most wonderful culinary creations are at your command.

Unrivalled flexibility, power & precise adjustment...

Some preparations, such as chocolate fondue, require very gentle cooking. While others require a quick, strong boil... To orchestrate all your recipes with talent, De Dietrich achieves the miracle of adjusting to all temperatures, from the mildest to the most intense, with unrivalled responsiveness. Any change in power, among the 20 cooking settings offered (including Boost), is instantaneous indeed. Its cooking zones reach record powers: up to 3,700W on classic cooking zones, 4,800W on horiZone and 5,500W for the new Tenor cooking zone. Available in different diameters, they bring together round, rectangular or oval, small and large containers, to beat the tempo with an innate sense of time.

- Increasingly high-performance features to achieve excellence.**
- ◆ **ICS:** recommends the best-suited zone for any given pan so that you get maximum efficiency.
 - ◆ **Elapsed time:** the time since the last heat adjustment was made is displayed on the keypad. This function is perfect for keeping an eye on dishes, and is essential for when you forget to set the timer.
 - ◆ **Recall:** programmed settings (for heat and time) are saved so that you can retrieve them should the cooking zone turn off unexpectedly.
 - ◆ **Switch - settings tracker:** with this function, you can move your pan from one zone to another and keep the same settings (cooking style and timer).
 - ◆ **Automatic pan detection:** once it is turned on, the hob automatically recognises a pan placed on any of its zones and displays it on the keypad.
- When time is scarce: functionality and precision are here to help.**
- ◆ **Boil function:** for pushing the physical limitations of time, with the ability to boil 2 litres of water in record time.
 - ◆ **Four direct access controls for added efficiency:** with a simple touch on the dedicated button, De Dietrich induction hobs provide you with instant access to power settings for searing, simmering, or keeping your dishes warm.
 - ◆ **Timers:** each zone is equipped with its own timer, for you to programme the cooking time.

Blanching function. Mastering the elements.

How about a sous-chef to help you cook a beautiful and authentic quince jam or a pan of crunchy, firm green beans?... To peel your fruits and vegetables more easily, preserve their colour and texture, while keeping their flavour intact, there's nothing like blanching them first. You can rely on De Dietrich to master this technique with talent. Simply place your food to be blanched in a saucepan with cold water and start the dedicated function. Your hob will almost take care of the rest: once the water has boiled - the temperature will not exceed the required 100°C and will remain at this level - the hob will automatically switch off after five minutes of cooking, with a beep. Then it's up to you to plunge your fruit or vegetables into a bath of ice water, for a chef's result and a cooking pleasure for the eye and the palate.

The most exacting safety standards.

To keep the hob completely safe whilst the zones are being cleaned, the **Clean Lock** feature allows you to temporarily block all commands for one minute. What is more, all hobs are fitted with ten security levels which guarantee you trouble-free cooking at all times:

- ◆ **Anti-Overheating safety feature:** exclusive to De Dietrich, it limits the temperature under the zone to 300°C. Oil, for example, then stays at a constant temperature, and there is no risk of ignition.
- ◆ **Anti-Overspill safety feature:** if liquid spills over onto the control panel, the hob turns itself off automatically.
- ◆ **Keyboard Lock:** this function prevents anyone - particularly children - from turning the hob on accidentally.
- ◆ **Residual heat indicators:** after a long cooking period, the zone surface may remain hot. A light showing the letter "H" appears on the keypad while the temperature remains above 65°C.
- ◆ **Automatic-stop system:** should you leave a dish untouched for a long time during cooking, the hob will switch off.
- ◆ **Cookware Detection:** if no container is placed on the induction hob, LEDs flash until it is started properly, and the system will turn itself off after one minute.
- ◆ **Small Utensils safety feature:** Cutlery or small utensils placed on the hob during operation are not likely to heat up; induction is only triggered by contact with metal surfaces larger than 10cm in diameter.
- ◆ **Voltage:** the hob is able to detect low voltages*.
- ◆ **Connection:** a beep is emitted and electrical circuits are protected in the event of an incorrect connection*.
- ◆ **Overvoltage:** this valuable safety feature prevents damage to electrical circuits, particularly in the event of lightning*.

*Within limits of tolerance of the French network.

INDUCTION HOBS WITH HOOD

A new De Dietrich creation and the stuff of dreams,
Allure hobs reflect the brand's authentic passion for design and pursuit of excellence,
with a constant focus on quality and performance.

A design to match your inspiration.

Available in a Noir infini version with unprecedented depth and velvety shades that beckon the touch, these unique compositions with their pure design combine intuitive use of a cutting-edge induction hob with a powerful and refined integrated cooker hood.

A collection at the forefront of trends. Available in 60 cm or 80 cm, these new De Dietrich creations give full rein to their talents, and play their perfect part in the most contemporary kitchen spaces.

A collection at the forefront of trends.

Available in 60 cm or 80 cm, these new De Dietrich creations give full rein to their talents, and play their perfect part in the most contemporary kitchen spaces.

A culinary virtuosity in tune with the times.

At the cutting edge of trends and technology, Allure brings together the very best in cooking and extraction. For truly virtuoso cooking, you can take advantage of the unrivalled modularity provided by the **two horiZone areas** and its extremely flexible digital interface. With fine-tuned control, a dedicated keypad for each cooking zone and twenty power settings, including Boost, will suit all your recipes. At the heart of this wide cooking area, the **extraction system** is elegantly placed to deliver its full power. As close as possible to your cooking, it instantly captures the fumes and odours released during cooking. Controlled by a central keyboard, its Brushless motor, as powerful as it is silent, comes with four suction speeds to match your requirements and culinary inspirations. The grease filter, easily accessible for cleaning once saturated in your dishwasher, conceals a receptacle to deal with any liquid spillage from cooking utensils... The ultimate sign of cleverness and practicality in this new creation of excellence.

CONVENIENCE, ADAPTABILITY AND PRECISION FOR GREAT COOKING

VITROCERAMIC HOBS

The vitroceraamic hobs brought to you by De Dietrich highlight a 65cm full glass surface finished with a stainless steel front frame. Their clean lines and sleek finishings combine elegance and sophistication with the ultimate functionalities, allowing you to realise your full culinary potential.

High-performance radiant zones.

Speedring Radiant Zones.

From the most intense cooking to the gentlest simmer, Speedring radiant zones ensure a constantly even distribution of heat, helping you to cook dishes that require long simmering, or bring large volumes of liquid rapidly up to the boil.

Extendible Speedring Radiant Zones.

The Double and Triple Crown extendible zones enable you to adjust their respective power levels to adapt to the size of the pan in use. This ensures that optimum heat is delivered for each type of cooking method.

VitroTech.

Gives more flexibility to your culinary interpretations.

De Dietrich has equipped the DPV4605HB hob with a new feature, for you to cook with a sense of moderation and efficiency: VitroTech allows you to combine two independent cooking zones to create a larger cooking surface for all types of containers, a fish pan or an oval casserole for instance. The heat is ideally distributed over the entire zone to ensure even cooking, and perfect culinary results.

Touch-sensitive commands for each cooking zone.

These remain visible and easy to read even when multiple dishes are being cooked at the same time, with all power and time indicators displayed at once. The 17 different cooking positions allow for a wide range of power adjustments, and making temperature selections is quick and easy thanks to two direct access keys. Finally, a separate electronic timer is provided for each zone for a greater degree of accuracy.

Safety: a De Dietrich guiding principle.

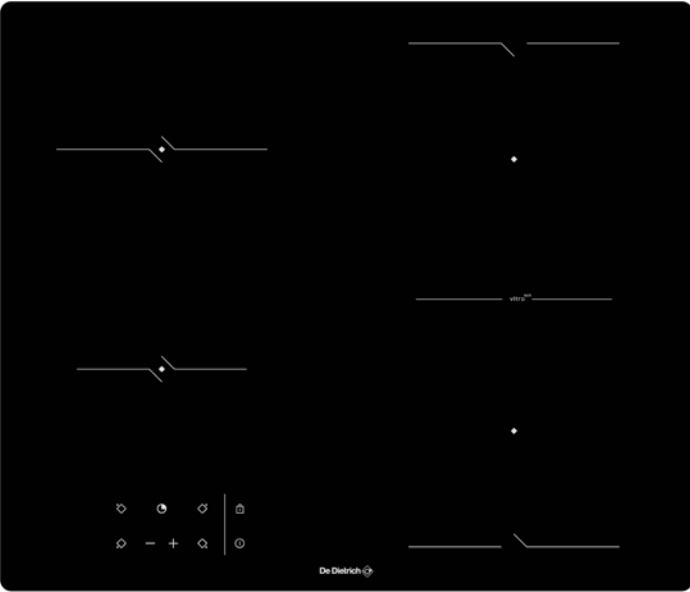

♦ **An Anti-Overspill safety feature** automatically turns the hob off in the event of any spillages.

♦ **An Automatic-Stop System** turns the hob off if you leave a dish alone for an extended period of time.

♦ **Residual Heat Indicators** are displayed while the surface temperature remains above 60°C.

♦ **A Keyboard Lock feature** prevents the hob being turned on accidentally, especially by children or while the cooking surface is being cleaned.

60CM VITROCERAMIC HOBS

DPV4605HB | BLACK

DPV4605HB
VITROCERAMIC HOB

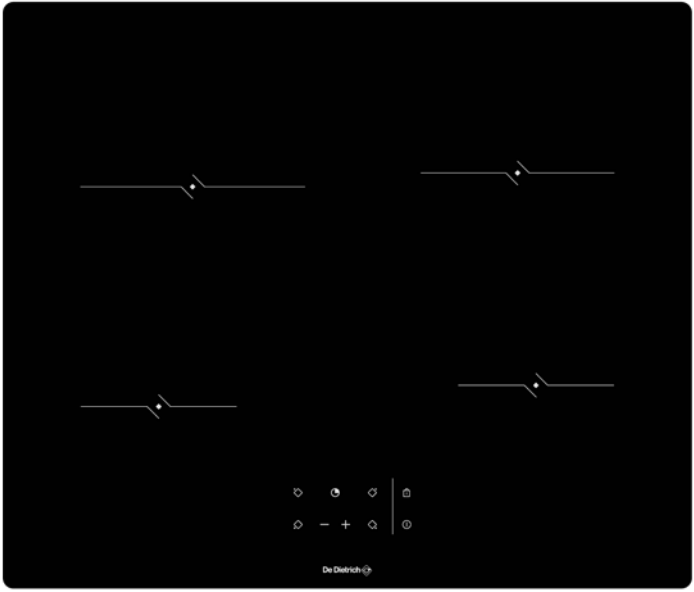

- ◆ 4 independent speedring zones with:
 - 1 flexible zone «Vitro Tech» (180mm x 415mm) of 4,000W
 - Rear Left 18cm / 1,800W
 - Front Left 14.5cm / 1,200W
 - Rear right 18cm / 1,800W
 - Front right 18cm / 1,800W
- ◆ Touch sensitive buttons

THE LEVEL EXPECTED OF A TOP QUALITY BRAND

GAS ON GLASS, STAINLESS STEEL AND ENAMEL GAS HOBS

The collection of gas and mixed gas and electric hobs brought to you by De Dietrich reflects its commitment to offering excellence in its designs, giving you total control over the energy you use.

The highest quality materials are combined with the utmost sophistication, contributing to both the stunning appearance and top-level functionality of all De Dietrich ovens and hoods.

A wide-ranging collection to suit everyone's tastes.

There is something to suit everyone's requirements in the most diverse collection designed by De Dietrich to date, with a wide variety of shades and sizes available. Available in 60cm, 65cm, 75cm and 90cm-wide models, all gas hobs are compatible with each other so that you can create the ideal cooking space you were dreaming of.

Stainless steel gas hobs. The elegance of flush integration.

Designed in a distinctly contemporary style, the De Dietrich collection of gas hobs embodies a tradition of excellence that encourages the perpetuation of culinary art with grace. The refined surface of some stainless steel hobs allows for seamless flush installation into the countertop, creating a cooking space that is both refined and functional.

Guaranteed performance.

The gas burners provided with De Dietrich hobs offer various cooking options and a wide range of heat settings. Leaving pans to simmer on the auxiliary burner or searing meats to perfection on the 3,800W Triple Crown burner are just two of the many ways that you can use them, with an even distribution of heat consistently ensured throughout the cooking process.

Gas cooking in complete safety across the entire collection.

A thermocouple safety system, located against the burner, is activated as soon as you press the knob to light the fire. If necessary, this thermocouple instantly and automatically cuts off the gas supply to prevent any leakage occurring should the flame accidentally be extinguished.

Ergonomically-designed knobs.

All knobs have been specially designed to offer the highest levels of ease and comfort during use. Adjusting the heat of the burners is an easy and accurate process.

DOMINO HOBS

The range of domino hobs in the new De Dietrich collection is one of pure excellence, with each offering the utmost in sophistication and technical innovation. Combine them to create a cooking space that is both unique and original.

A collection of 38cm domino hobs with a unique design.

Just like the different instruments of an orchestra. Each one of the elements of the 38cm collection have their own part to play in creating a perfect ensemble. These appliances can be used either on their own or in conjunction with another. The design and dimensions of the 38cm horiZone Induction domino hobs, available in both gas on glass and Teppan yaki types, are a harmonious combination, and will fit beautifully into any set up, in any number of possible arrangements and combinations. They are also available in a classic 30cm size.

horiZone, a creative innovation from De Dietrich.

This cooking zone, already one of the largest and most powerful around, adds yet another dimension to the outstanding performance that is expected from an induction hob: freedom. This modular space enables you to work with one or two classic cooking zones at the front and back of the domino, as well as a wide single zone perfectly designed to accommodate large pans and dishes, all whilst guaranteeing a perfectly even distribution of heat.

Gas domino hobs. Expressing every talent.

Gleaming glass surfaces are crowned with single-burner cast-iron grills.

38CM INDUCTION DOMINO

DPI4230X | STELLAR STEEL

DPI4230X
AI TALENT

- ◆ 2 independent zones with 1 horiZone cooking space 40cm x 23cm of 4,600W
- ◆ White LCD Screen
- ◆ Touch sensitives buttons
- ◆ 20 cooking positions
- ◆ Ai Culinary Guide: 74 options
- ◆ 2 Boosters / 2 timers
- ◆ 4 direct access controls including Boost
- ◆ 9 functions : Lock, Recall, ICS, Elapsed time, Automatic pan recognition, Clean lock, Boil, Boost, Blanch
- ◆ Total power of the hob 3,700W
- ◆ 10 safety features including residual heat indicator on keypad and central locking
- ◆ Built-in dimensions: H 53 mm x W 263 mm x D 488 mm

Ai talent:
The hob automatically adjusts the power and cooking time with precision based on your choice from 74 different foods. It recommends the ideal cooking zone and utensil to ensure exceptional results.

38CM TEPPAN YAKI DOMINO

DPE4400X | INOX

DPE4400X
TEPPAN YAKI DOMINO

- ◆ Adjustable thermostat from 0°C to 250°C
- ◆ Positions per knob
- ◆ Total power of 2,500W
- ◆ Power and residual heat indicator on keypad
- ◆ Built-in dimensions: H 80 mm x W 490 mm x D 340 mm

HOODS

Developed and designed to fit with elegance, strength and discretion into the contemporary kitchen trend, this new collection dedicated to suction is like no other.

Decorative, island, worktop or ceiling hoods, filtering units... At the cutting edge of technology, they adopt the highly aesthetic approach of Philharmonie ovens and hobs to create the ultimate prestige ensemble.

A+ rated box decorative hood. Top-class performance.

De Dietrich engineers have achieved major technological success in this sophisticated new collection of decorative hoods. Recognised as having an A+ energy rating, they offer the best possible performance both in terms of energy savings and efficiency.

This excellent perfectly engineered design that combines the efficiency of three stainless steel filters with a highly effective motor and LED lighting: two key elements for significantly limiting noise levels and energy consumption.

Motion Control. Masterful contactless suction.

Touching the controls of your hood when you are preparing food is bound to get messy. How about avoiding this by controlling suction with a simple wave of the hand? Contactless Motion Control technology means you can interact with our hood without touching it. A sensor detects and interprets the movement of your hand and the three little gestures to be made to modulate the lighting intensity and the suction power according to the needs of your preparations in progress.

A technological achievement by De Dietrich designed to enhance the pure lines of its appliances and give free rein to your culinary imagination without spending more time than necessary on cleaning.

Autolink. Hood and hob in perfect harmony.

If you want to live your passion even more intensely, imagine a hood whose suction can be tuned to your culinary renditions, without you even thinking about it...

This is the daring achievement of Autolink technology: the suction system and hood lighting are activated spontaneously as soon as the induction hob is switched on, via a simple infrared link. It adjusts its suction speed in total autonomy according to the programmed power of the cooking in progress, then it switches off automatically once the cooking is finished.

So all you have to do is focus on your culinary preparations with all due attention.

Power equalling efficiency.

A place where everything comes together, the kitchen now breaks down barriers to open up to the dining room, living room and lounge. With capacities of up to 740m³/h, De Dietrich extractor hoods is part of this metamorphosis, ensuring efficient, regular renewal of ambient air in larger spaces.

Sensor technology. An automatic hood, a virtuoso soloist!

To ensure the right suction power for the dish you are preparing, rely on your hood. Equipped with intelligent sensors, it switches on autonomously as soon as it detects heat and steam coming from the preparations in progress, and its speed adapts automatically to cooking intensity. It will stop working once the smoke has been expelled.

A carefully thought-out design, and top-quality manufacturing.

De Dietrich has developed a collection of hoods that combine design, technology and functionality to the same high standard. From the moment they are installed and for the rest of their lives, thanks to a cleverly designed fixing and adjustment system.

LED lighting. To highlight your well-being.

De Dietrich has decided to fit its entire collection with this unique type of lighting, which uses almost 85% less electricity and lasts 20 times longer than an incandescent bulb. Designed with elegance and with the aim of combining refinement and functionality, your De Dietrich hood is adorned with long integrated light strips. They will focus soft and powerful brightness on all your preparations in progress as well as ideal lighting when enjoying the meal.

A subtle interpretation of comfort by De Dietrich.

◆ **Light intensity dimmer.**
Enhancing its primary function, your cooker hood features a dimmer switch that allows you to personalise and perfect your kitchen lighting by simply flicking the command knobs.

◆ **Ambient lighting.**
Warm colour or subdued atmosphere, neutral ambience, white light or daylight... the five levels of intensity available will help you modulate the ambient brightness to suit your needs and desires, with nuances and refinement.

Hood with Plasma Filter. Maximum efficiency, absolute comfort.

De Dietrich's renewed challenge is to contribute to your well-being day after day, year after year, so as to achieve excellence. This new collection of Plasma hoods, installed in recycling mode, requires very little attention to achieve their full effectiveness. The exceptional properties of the plasma filter and its unlimited lifespan (unlike the carbon filter) make it possible to reduce its environmental impact. Self-cleaning and long-lasting, it is composed of ions and activated carbon: a unique design which promotes suction and complete elimination of bad smells and airborne bacteria... so that all you get back is the delicious aroma of your dishes, to the delight of your senses.

Hood with HEPA Filter. Feel the clean air all day, every day.

To ensure that your kitchen remains a real living space, for sharing and enjoying, De Dietrich has enhanced its range hoods with an ingenious air purifier. As soon as you feel the need to clean your kitchen, simply switch it on and the level of ambient air quality detected will be displayed on the control screen. Thanks to the HEPA filter, air will be regenerated, cleaned from the tiniest suspended particles (bacteria, dust and allergens, etc.). It will also protect the hood and its ducts from grease deposits and other dirt so as to optimize performance and minimize maintenance.

Filter units. Power with style.

De Dietrich has developed new filter units inspired by the professional world. Their motor's ergonomics and power provide maximum suction efficiency. Odours, fats and vapours released during cooking are directed to the filters by a natural vacuum effect and will be eliminated once and for all. Although demonstrating remarkable efficiency, they are discreet and operate with utmost silence. In fact, they are integrated into a tall piece of furniture out of sight.

Worktop hood. Suction and cooking perfectly in tune.

This object of luxury and elegance arouses rare emotions. Its innovative design provokes astonishment and admiration. Its distinctive feature is that it sits right next to the hob, revealing only a subtle, flat space made of deep black glass.

Telescopic hoods. The utmost discretion.

The special feature of the telescopic hood is that it disappears under a wall cabinet, leaving nothing to show about its functional attributes. Its new self-compensating closing system ensures smooth, seamless operation..

Unrivalled technological mastery in an exceptional minimalistic design

Design and technology come together in the programming of our extractor hoods.

The new collection is testament to this: the elegant glass facade and copper-clad controller contribute to the stunning appearance of our new Black Heritage, Black Infinite, Inox Stellaire, ovens. Inspired by the innovations made to our De Dietrich ovens, hobs and dishwashers, various features are now available on many of the hoods in our collection.

◆ Boost function.

When selected, this feature immediately sets the hood to work at maximum extraction speed for even greater efficiency when large amounts of odours and fumes are present.

◆ Remote Control.

Direct suction even from a distance! Your hood's remote control features a very practical function, allowing you to switch it on, modulate its suction power or adjust its lighting intensity. The perfect way to give free rein to your conversations and dinners with friends.

◆ Timer Function.

The purpose of this function is to remove fumes once and for all, and to rid the air of persistent fumes and fumes at the end of cooking. Your hood will continue to operate for the duration you have set, between ten and ninety minutes, to fully purify the air in the room.

Hoods with Brushless motor. Better efficiency. Better performance.

Requiring your hood to have both more character and style and more efficiency with the greatest discretion is no longer impossible.

Quiet and more robust, the Brushless motor it features offers the best efficiency in terms of suction performance and energy consumption. In this transformation of the cooking area more than ever dedicated to culinary arts, these exceptional qualities are now essential to the new De Dietrich art of living.

AN INTELLIGENT DISHWASHER FOR OPTIMUM CONSUMPTION

DISHWASHERS

There is a dishwasher in the De Dietrich Collection for every requirement.

They are created to the very highest standards: elegantly sophisticated, with a clever and spacious interior layout built to accommodate 13 place settings, and equipped with intelligent electronic programming for exceptional performance.

***When aesthetics
enhances function to play
the perfect tune.***

De Dietrich's built-in dishwashers feature a range of colours and materials, and a control panel that is perfectly in line with the rest of the cooking collection. The result is a range of highly stylish dishwashers that play their part in total harmony. The fully built-in models only offer a completely smooth front, matching the kitchen units and concealing the controls on the edge of the door. Being invisible: the ultimate elegance for a De Dietrich appliance!

Eco-design by De Dietrich.

For many years, De Dietrich has offered products of outstanding quality and respect for the environment. This is evidenced by its Dishwashing Collection, whose models are rated between B and C for electricity consumption.

***ICS Technology.
An intelligent dishwasher
for optimum consumption.***

This technology makes use of sensors which automatically detect the level of dirtiness. They accurately analyse the quantity of washing, decide on which washing, rinsing and drying cycles to use, and adjust the levels of water and energy consumption required throughout the cycle with the utmost precision, as well as the length of the washing cycle.

***Quietness: an example of the art
of living by De Dietrich.***

If silence is one of your golden rules when it comes to choosing a dishwasher, you can be sure that De Dietrich has the same high standards. All of them have been designed to operate as quietly as possible to ensure your well-being, as demonstrated by these new 14 place settings models whose sound level is only 42 dB(A), one of the lowest on the market. A remarkably high discretion (a feature limited to certain models).

***Ultrareal fascia:
intuitive and smart.***

Interact with your dishwasher as you would with a kitchen crew after service. The intuitive interface has been redesigned to make the most of its wide array of programmes and features. Its interactive screen displays greater readability and clarity. The display shows programme and option selections with optimum visibility and clarity.

***Smart Autodose:
a more efficient use
of detergent and time!***

Your dishwasher is equipped with a new detergent box, accessible on the inner-door. It contains a removable interior box with a completely new design to accommodate the liquid detergent of your choice. Its capacity allows you to perform up to 15 washing cycles without having to repeat the operation everyday. Smart, it automatically delivers the right amount of detergent according to the programmed cycle. An ingenious and economical solution from every point of view.

***Interior LED lighting:
a new vision of comfort
by De Dietrich.***

Enjoy a perfect view of the washing space and all your crockery, even when it's getting dark... De Dietrich once again proves its commitment to perfection and its acute sense of detail. Its dishwashers light up as soon as the door is opened. Strategically located LEDs provide optimum interior visibility to facilitate storage and unloading of your crockery. And throughout the cycle, they will emit a subtle beam of light from the side of the appliance to let you know it is running.

***PlusWash spraying
system.
Uncompromising
high-end design &
maximum washing
quality.***

Get the best out of your dishwasher and enjoy it fully without having to hand wash the dirtiest dishes... This is PlusWash bold challenge: an innovative spraying system designed to significantly optimize water spraying and washing performance. Its unique feature is the addition of a satellite arm to the main reel located at the bottom of the tank. Together, they perform a powerful and liberating round of water and detergent into the smallest nooks and crannies to reach the crockery wherever it is located, with all the force required to rid them of all traces of food residue, even the toughest ones. Combined with MasterWash or Auto programs, this technology guarantees optimal efficiency, while reducing cycle duration by four and saving 20% water and energy (vs. an Eco cycle). A talented duo to assist you with the greatest and most brilliant intelligence!

***Lower rack
and Clean Jets System.***

Flexibility and modularity are the hallmarks of this irresistibly versatile lower rack. Its spikes fold down to accommodate more easily your large cooking utensils such as frying pans and saucepans. Some models combine this space with an innovative spraying system dedicated to wine carafes or similar containers which can be difficult to wash. Perfectly held on the rack spikes when powerful jets of water are sprayed, their washing has never been so enjoyable and the result so impeccable.

***Space optimization.
A score with no wrong notes.***

Pay tribute to culinary arts, be creative, mix styles and crockery... To give free rein to your culinary inspirations, these new dishwashers combine efficiency and ease of use on a daily basis. Providing flexibility, ingenuity and modular storage, while guaranteeing impeccable washing quality, the layout has been designed to accommodate your everyday crockery as well as you special tableware.

Dishwasher XXL for 16 place settings. Give all your tableware a new setting! De Dietrich has designed this exceptional dishwasher for the most contemporary living spaces. With its extralarge dimensions, it fits seamlessly and in perfect harmony into kitchens with a central island and a raised worktop.

The interior layout has been carefully designed for unrivalled modularity. The flexibility of the lower and upper racks accommodates the largest cooking utensils as well as very large dishes - those 33cm diameter plates for example that you love to place on your table, wine carafes, crystal flutes, cups and saucers, long cutlery... Nothing stands in its way, leaving no room for compromise between machine and hand washing.

Third storage basket. Dishwashers with 14 and 15 place settings are equipped with a third rack, dedicated to cutlery and cooking utensils. Sides slide out to make room for long stemmed glasses stored in the lower basket, ensuring that they are washed safely and perfectly.

Height-adjustable upper rack. This system is very useful when you need more height for large dishes and other bulky utensils stored on the lower level.

Upper rack with Glidetech system. For greater comfort, some models include a ball bearing system called Glidetech which allows very smooth handling of the upper rack when sliding out of the dishwasher.

Spotlight. Spotlight informs you that the programme has finished by shedding an orange beam onto the floor.

***Automatic door
opening: natural
and economical drying.***

To maximize drying efficiency, it is essential that hot, humid air is properly exhausted out of the dishwasher. This is the reason why De Dietrich imagined this automatic door opening function at the end of the cycle (declutching option). The operating time of your device is thus minimized, energy consumption reduced by 20% for optimal drying results!

***Aquablock:
security for total
peace of mind.***

Enjoy complete protection with Aquablock, which comprises anti-overspill and anti-leak systems, and an electrical water cut-off system.

Sliding Door.

Thanks to their sliding door system, De Dietrich dishwashers adapt easily and discreetly to all kitchen configurations.

A symphony of programs combining virtuosity and tempo.

Intensive: a programme designed to wash extremely dirty dishes more efficiently, and overcome even the stubbornest of stains on cooking utensils.

Universal: for dishes with a normal level of dirt, including slightly soiled pots, plates, glasses, and pans.

Eco

Eco: this 45°C wash cycle stands out as being the most efficient, in terms of both water and energy consumption.

Glass: a cycle suited to washing and drying fragile dishes, especially glasses.

90 min: 1 hour 30 minutes programme at 65°C designed to wash and dry a daily load of dishes with efficiency recognized by the A Label.

OptiA 58 min: quick program with impeccable results, ideal for normally soiled dishes requiring a fast washing and drying cycle.

Quick: a short cycle for lightly soiled dishes that require a quick wash

Soak: very short detergent-free cycle lasting 15 minutes, for pre-rinsing heavily soiled dishes or wetting them down before a wash scheduled for the next day or the day after.

Enhanced Wash: an option that improves the cleaning of very dirty dishes, characterized by a higher temperature during the main wash and an additional rinse cycle.

Enhanced Drying: to improve the drying efficiency, the Extra Drying option increases the temperature during the final rinse and extends the drying phase.

Energy saving: an option that reduces consumption for smaller loads of dishes.

Half-Load Program: this feature allows you to run the dishwasher without waiting for it to be full. Simply load your dishes into either the upper or lower rack and select the 'Upper Rack' or 'Lower Rack' button, enabling the appliance to efficiently target its cleaning action with an economical approach.

Self-Cleaning: carried out empty and at very high temperature, this cycle sanitizes the entire structure of your machine (walls, racks, reels and filters) to always accommodate the crockery in a perfectly clean and healthy environment.

Night silence: a dream programme when energy prices are dropping. At a very low temperature over a longer period than a conventional cycle, it ensures perfect washing in all circumstances. Particularly quiet and economical at night, it's perfect for everyday dishwashing, leaving you with spotless crockery the next morning.

Hygiene 70°C: designed specifically for dishes requiring rigorous cleanliness, such as baby bottles. It operates at a very high temperature during the main wash and final rinse cycle to sterilize, eliminating 99.9% of germs and viruses, and preventing their proliferation on porous utensils like cutting boards. An excellent antibacterial treatment!

MasterWash: exclusive to De Dietrich. Select with confidence this unique program, combining gentle washing to preserve your delicate crockery, glasses or cutlery stored in the upper rack with intensive cleaning of the dirtiest dishes and cooking utensils placed in the lower rack.

Steam Wash: exclusive to De Dietrich. Forget 'hand-pretwash'. This program includes a 10-minute steam phase at the beginning of the cycle. Its action helps remove resistant dirt and eliminate 99.9% of bacteria from your crockery.

SIGNATURE
DE DIETRICH
PERFORMANCE

REFRIGERATORS

With high standards in preserving the freshness and flavour of your food, along with generous storage space, De Dietrich refrigeration showcases a variety of subtleties. Glass transparency matches the metallic accents of accessories, with intelligently laid-out space and electronically controlled temperatures. De Dietrich refrigerators and freezers blend naturally into the kitchen, the ultimate living space.

The best of uncompromising refrigeration.

Give more impetus to your culinary creativity, by surrounding yourself with the very best, in complete and utter confidence... That's the raison d'être of this new collection of refrigerators and freezers in which De Dietrich reveals its perfect mastery of refrigeration.

◆ No Frost technology.

Its integrated ventilation column propels dry and cold air, ensuring a perfect and even temperature ideally distributed throughout the refrigerator or freezer. Keeping the food fresh longer, it extends the pleasure of enjoying it up to three times longer, prevents the frost from freezing, and puts an end to freezer defrosting.

◆ Dynamic cooling.

Unlike static cooling, dynamic cooling constantly circulates humid air, ensuring ideal preservation for all dishes, regardless of where they are stored on the shelf.

◆ Some models combine these two technologies so that you no longer have to hesitate between dynamic cooling and No Frost.

This ingenious solution allows you to preserve and freeze even the most delicate dishes by the book, without the need for defrosting. Each compartment is independently cooled, so you can return to the ideal temperature twice as quickly after opening the door to preserve and secure all your stored food.

Masterfully controlled refrigeration.

Stringent food preservation is a major concern for you, as it is for De Dietrich. The **electronic management and regulation of temperature**, controlled by an integrated probe, provide the precise reliability required to guarantee optimum storage and freezing conditions.

Several models offer two 'Super cooling' and 'Super Freezing' features. If you promised your parents that during their next visit they would enjoy both the fresh produce from the garden and those gorgeous free-range chickens they brought you, make sure you activate these two functions beforehand to boost temperature recovery and preserve all their flavours.

Refrigeration by De Dietrich: combining know-how and good manners.

Welcome your guests as they deserve and treat them to a meal with dishes that are selected and varied, tasty and delicate, impeccably fresh and of great taste and nutritional quality...
With De Dietrich, improvising is not on the agenda. The brand has designed a collection that reconciles all your conservation requirements with ingenious and refined spaces that you will enjoy arranging. No one remains unmoved before such perfection! Make up your own mind...

Interior design.
A beautiful orchestration.
An ode to metal and chrome finishes and to glass and light! De Dietrich skilfully combines refinement and creativity to enhance the interior design of its refrigerators and reveal how qualitative and functional are their many components.

◇ Such as **Metal Cooling**, the refrigerator's rear wall coated with stainless steel. But don't be mistaken: while the unique aesthetics and ambient comfort prevail, its primary mission is to help maintain temperatures in the compartment and optimise the preservation of fragile and delicate products, such as fish or meat.

◇ **Integrated LED lighting** on the side walls (depending on models) shines a light on the elegance of the space dedicated to food storing. Highly energy-efficient, it provides maximum visibility on everything stored inside.

◇ **Glass shelves** are elegant, stable and hygienic. One of them features a chrome hoop, providing ingenious additional space for your bottles.

◇ Same approach for the inner door, equipped with numerous modular door balconies with chrome finishes. **The Smart System balcony** notably provides six different heights for arranging condiment bottles, delicatessen products or jam jars.

Dedicated spaces: a music score without any wrong notes.

To pay tribute to culinary art, trust your De Dietrich refrigerator.
Maximizing interior space, managing temperature and optimizing the freshness of various foods: this is the role played by the many dedicated pieces of equipment, cleverly located in the appropriate cold zone, so as to preserve each of your products. Guaranteeing your well-being, they also demonstrate their ingenuity in tune with your lifestyle and consumer habits.

◇ **A special dairy box** slides out from under the shelf; ensuring optimum storage conditions without spreading odours, it is intended in particular to cheese and butter.

◇ **Fresh food compartments** are equipped with a small 'Ultra fresh' activated charcoal box that keeps fresh food and catering dishes up to three times longer, and preserves their flavour and nutritional quality.

◇ **The crisper** is equipped with a humidity control to provide the best and most suitable environment for your fruit, salads and early vegetables.

◇ As far as cold beverages are concerned, with '**Beverage Cooler**', you benefit from an optimized space, hidden under the crisper, to store and retrieve small bottles and cans that will always be as fresh as desired.

◇ **Twist Ice** is the easiest way to get ice cubes quickly: it features a dedicated compartment for making ice cubes and a removable container for easy collecting and, above all, storing large quantities in advance (on some De Dietrich refrigerators and freezers).

◇ **De Dietrich freezers are as functional as refrigerators.**

Big Box for instance is a large capacity compartment designed to provide even more generous and efficient storage for bulky frozen foods.

The **Sliding Tray system** will undoubtedly transform the way you reach all stored products (pizza, condiments, frozen ready-made dishes, etc.).

BUILT-IN FRIDGE FREEZER

DRC9455EN

DRC9455EN
BUILT-IN FRIDGE FREEZER

- ◆ Integrated fridge freezer 300 litres
 - ◆ Energy labelling: E Class

BUILT-IN UPRIGHT FREEZER

DFU1781ED

DFU1781ED
BUILT-IN UPRIGHT FREEZER

- ◆ Integrated upright freezer 196 litres
- ◆ Energy labelling: A+ Class
- ◆ Cabinet height 177cm
- ◆ Fixed assembly with hinge hole
- ◆ Climate class SN-T
- ◆ Noise level: 40 dB (A)
- ◆ Built-in dimensions: H 1770 mm x W 560 mm x D 560 mm
- ◆ Freezer: 196L
- ◆ No frost
- ◆ 2 functions : Eco, Freezer booster
- ◆ 6 drawers
- ◆ 2 flat compartments
- ◆ 2 safety glass shelves
- ◆ Accessories supplied: Twist ice
- ◆ Freezing capacity 11,5kg/24h
- ◆ Freezer autonomy 6h

No frost system:
The No Frost system prevents frost formation inside the freezer and on products which therefore remain perfectly identifiable. It also permits energy savings.

FRENCH DESIGN AND ART OF LIVING

WINE CELLARS

Some objects immediately stand out as the benchmark of French art of living. With their remarkable quality and sleek design, these new wine cellars by De Dietrich in the Infinite Black collection enhance emotions and instantly trigger desire. Combining modernity and tradition, know-how and innovation, they undoubtedly meet all the conditions required for the storage and ageing of grands crus. Enthusiasts will love it...

Design in black major.

Discover these new luxury items designed with the utmost refinement, combining the finest materials with the ultimate elegance. As part of a new art of living, they are in line with current trends and fit seamlessly into your kitchen. Their dimensions have been designed to be perfectly in line with the 45 and 60 cm niche units. Their flawless profile is thought to take up a prominent place alongside the De Dietrich cooking collection, or to be placed in any other privileged space for a perfect tasting experience.

Touch-sensitive controls. Uncompromising refinement.

An aesthete and a connoisseur, you are looking for the most beautiful cabinet for your precious bottles, and you want to showcase them before enjoying... Fall under the spell of De Dietrich wine cellars. **Their lines, highlighted by their stunning glass door** and front fascia, appeal to the sense of touch as much as that of sight. The stripped-down interface is in tune with intuitive use. You just have to tap the **touch-sensitive controls**, to reveal the **subtle backlit LED display**; they will allow you to manage temperatures precisely and ensure that all conditions are met for optimum storage. More than ever, our wine cellars are the mirror of this new art of living, an invitation to share and enjoy.

Push-to-Open opening. The epitome of elegance.

The majority of our wine cellars feature a flawless design, but here the elegance is pushed to the limit with the no-handle glass door. Thanks to the **electronically assisted Push-to-open system**, a light tap on the dedicated key is all it takes for the door to open or close smoothly. The ultimate comfort that leaves you free and confident to store or retrieve one of your best wines.

Regulated temperatures to play the ultimate symphony.

Your reserve of good wines includes grands crus and the enthusiast in you wants to wait to taste them at their very best... To store and age your best bottles of wine by the rulebook, preserving their unique flavours and aromas, rely on the Brand's unrivalled expertise, and on its new wine cellars. Electronics reign supreme here, providing a **constant temperature** with all the precision required to ensure optimum storage and tasting conditions... Managed and **regulated between 5° and 20°C**, the actual temperature inside the cellar is permanently displayed on the digital screen for better control. Some models offer **two completely independent and individually adjustable zones**, so you can fine-tune the temperature to the exact degree required for your wines: for instance, a cool zone between 6°C and 11°C for champagne, and a zone between 12°C and 18°C for Bordeaux grand crus. Depending on your needs, your wine cellar can be used to age your wine at between 12°C and 18°C or for temporary storage. Get a taste of excellence to successfully orchestrate all your dinners in perfect harmony.

LED lighting. Showcase your grands crus.

De Dietrich has opted for LED lighting, which provides a **soft, gradual brightness** in your cellar without altering the quality of your wines over time. Do you still have this excellent Sancerre to complement your cheese platter? The warm and inviting atmosphere of your De Dietrich wine cellar will allow you to shine a light without having to open the door in order to play the perfect sommelier...

Dedicated spaces and technology. A music score with no wrong notes.

Cutting-edge design and expertise. De Dietrich wine cellars reflect the exacting standards of aesthetes, leading wine merchants and master sommeliers. Explore and share the captivating subtleties of De Dietrich wine cellars. Their technology will ensure that your passion for wine and gastronomy remains intact.

♦ Anti-UV glass door.

A perfect blend of technology and aesthetics: while the glass door enhances its exquisite contents, its treatment filters out the ultraviolet rays that can cause irreversible oxidation of tannins.

♦ Anti-Vibration System.

Nothing can interfere with the storage and ageing of your wine: the motor mounted on Silent Blocks guarantees your cellar's exceptional stability and protects it from any vibrations that could ruin the appearance and taste of wines.

♦ Anti-tilt wooden honeycomb shelves.

Depending on the model, the compartment with its various wooden shelves can hold up to 46 bottles, ensuring that each one is perfectly protected. Their unique honeycomb design is signed De Dietrich and provides unequalled ease of storage. Very stable, they will slide out of the device without tipping over.

♦ Activated carbon filter (depending on model).

A healthy, odour-free environment optimises wine storing. Some models are equipped with an active carbon filter which, combined with the fan, completely eliminates unpleasant odours and bacteria in the wine cellar, to purify the air for many months.

♦ Hygrometer (depending on model).

Humidity plays a vital role in wine ageing and storing: this is the reason why De Dietrich has integrated on its shelves a sensor that analyses the humidity level in the ambient air. With well-controlled humidity, you will enjoy your wines in the best possible conditions, whether they are intended to be enjoyed soon, or to be stored for many years.

♦ Temperature/Open Door Alarm.

To ensure optimal conditions at all times, your wine cellar alerts you when the temperature no longer matches the selected setting or if there is a difference of plus or minus 5 degrees.

**DUW20FB
WINE AGING CELLAR**

- ♦ Built under
 - ♦ Up to 20 bottles
 - ♦ Fan assisted cold
 - ♦ Electronic temperature management
 - ♦ Anti-vibration system
 - ♦ Wood shelves
 - ♦ Integrated hygrometer on the shelf
 - ♦ Removable and anti-tip shelf
 - ♦ Interior light
-
- ♦ Front panel touch controls
 - ♦ Temperature display
 - ♦ Glass equipped with UV filter
 - ♦ Built-in dimensions: H 825 mm x W 300 mm x D 575 mm

DUW20FB

Hygrometer:

To monitor the preservation of wine in optimum conditions, the hygrometer, integrated into the rack, is an essential tool for measuring the humidity level in the cellar to ensure that it corresponds to the ideal setting for the wine.
